

# Release notes

## Trunk

The following modifications were made since the previous release:

- Medium- and high-fidelity hydrodynamic models were added.
- Mass- and inertia properties were derived from as-built values instead of estimations.
- The main sheet value was converted into a dimensionless number without an offset.

## Release 1.0.0

In April 2023 the trunk version was used during the April/May basin slot in the Offshore Basin. No modifications were made during the test campaign. After the test campaign a tagged version (1.0.0) was created.
