

@NONRINST

The **parameter** attribute @NONRINST is used to omit in an entity any [@NRINST](#) parameter, so the number of cases cannot be defined by such parameter (in general only a list of singular values will be present).

Syntax

Place @NONRINST in the data slot of the parameter

Remarks

Is included in QEntityData to define the current entity to contain no table (so only a list) and as such, it overrules possible [@NRINST](#) attributes contained in any of the parameters in the entity.
