

@OPTIONLIST

The **parameter** attribute @OPTIONLIST is used in an |OPTIONS| script to define a list of comma separated parameters as selection sequence in the database selection dialog.

Syntax

Place @OPTIONLIST:ParameterName,ParameterName,etc in the data slot of the parameter

Arguments

- ParameterName is the name of the option parameter (comma separated without spaces)

Remarks

In the data slot of a parameter you can create a script using an |OPTIONS| syntax that will enable you to invoke the database selection dialog. With this attribute you are able to define which parameters should be used to query the data set.
