

@ORDER

The **value or string parameter** attribute @ORDER is used to define the relative position of a value in the [Workbase](#).

Syntax

Place @ORDER:RelativePosition in the data slot of the parameter

Arguments

- RelativePosition is the position relative to other parameters containing the @ORDER attribute.

Remarks

@ORDER allows the knowledge engineer to affect the sequence of parameters presented during a dialogue or in the input list. The @ORDER values of parameters to be presented need not to be subsequent values. Parameters are sorted on RelativePosition. Values with no @ORDER attribute are placed behind parameters with the @ORDER attribute.
