

@POINTER

The **string parameter** attribute @POINTER is used to define a [TeLiTab](#) (string) parameter as pointer and not as object container.

Syntax

Place @POINTER in the data slot of the parameter

Remarks

If used in a Telitab parameter that is computed by means of an object, it will be given the name of the object instead of the contents of the object, e.g. TelitabPar#=ObjectPar(@Goal_1,...,@Goal_n,@Arg_1:ArgVal_1,...,@Arg_m:ArgVal_m), TalitbPar# will become the value "ObjectPar" instead of the ObjectPar contents.
