@RECALCONEXIT

The **parameter** attribute @RECALCONEXIT is used in an entity (in QEntityData) to avoid real time recalculation upon providing or changing input in this entity. Propagation and (re)calculation is performed upon leaving the entity.

Syntax

Place @RECALCONEXIT in the data slot of the parameter

Remarks

This attribute can be used if immediate recalculation in the entity takes too much time and leads to unacceptable waiting time after any input event.

Member of functional group: Modeling

Member of knowledge base type: Taxonomy type
