

ACOS

ACOS returns a trigonometric arc cosine of a numerical expression

Syntax

ACOS([NumExp](#))

Arguments

- [NumExp](#) is a numerical expression

Remarks

1. ACOS returns the arc cosine (inverse cosine) of [NumExp](#); that is, the angle with a cosine of [NumExp](#). The result is in [Radians](#).
2. Please note that input values should be between -1 and 1

Examples

ACOS(0.5)

returns [1.05](#)

Example knowledgebases

Download

An example knowledgebase of this function can be downloaded [here](#).

Description

The example knowledge base contains all trigonometric functions.
