

@TEXTDELIMITER

The **relation or constraint** attribute @TEXTDELIMITER is used in a relation that is referring to a [TeLiTab](#) with multi case text values, it defines the delimiter between these text elements (by default carriage return line feeds or [CrLf's](#)). Used in combination with [@TEXTLASTDELIMITER](#).

Syntax

Place @TEXTDELIMITER:Delimiter in the data slot of the parameter, relation or constraint

Arguments

- Delimiter it the delimiter you want to specify. This is a string, so use quotes and include spaces if necessary

Remarks

When you have a [TeLiTab](#) with multi case values, you can make a sentence of this dataset by creating a relation, for example, Sentence\$=[TeLiTab](#)#. TextValue\$, and using @TEXTDELIMITER ":" and [@TEXTLASTDELIMITER](#):"and" to place comma's and an and between the values.
