@MULTIGOALS

The **object parameter** attribute @MULTIGOALS is used to allow different top goals for each case in the table of the object.

Syntax

Place @MULTIGOALS in the data slot of the parameter

Remarks

- The attribute @MULTIGOALS makes it possible for any instance of the object in a solution to have different goals in each case of the table. If the @MULTIGOALS attribute is present in an objects data slot, Quaestor will determine the top goal stack for each case separately whereas if not present, the top goals are determined only once.

Member of functional group: Modeling

Member of knowledge base type: Classic and general type, Scenario type and Taxonomy type
