

@USESOURCE

The **parameter** attribute @USESOURCE is used in an |OPTIONS| script to return to the source object on reopening and not to the current value.

Syntax

Place @USESOURCE in the data slot of the parameter

Remarks

In the data slot of a parameter you can create a script using an |OPTIONS| syntax that will enable you to evoke the database selection dialog. With this attribute you force the dialog to reuse the source data instead of returning to the current selection in the dialog.
