

@HIDEINTELITAB

The **parameter** attribute @HIDEINTELITAB is used in a (string) parameter if you do not want it to be included in [TeLiTab](#) set that is created on a location above the object in which it is present.

Syntax

Place @HIDEINTELITAB in the data slot of the parameter

Remarks

If you collect data in a hierarchical (taxonomy-based) solution it may be annoying to have the collected data on all levels of the data structure in the collected data again. @HIDEINTELITAB avoids this gracefully.
