

@PARENTENTITY

The **value parameter** attribute @PARENTENTITY is used to define a Value parameter in an Entity to contain an Entity ID, enabling [Workbase](#) selection and Taxonomy maintenance.

Syntax

Place @PARENTENTITY in the data slot of the parameter

Remarks

Double-clicking a value with this attribute invokes the modal Continue button. If you select an entity in the current taxonomy or solution and press the Continue button, you will return to the original entity and the value of QEntityID of the selected Entity will be saved as value.
