

@INIVAL

The **value parameter** attribute @INIVAL is used to assign an initial value to a parameter used as part of an interative calculation. This may be necessary or more efficient to achieve convergence.

Syntax

Place @INIVAL:Expression in the data slot of the parameter

- Expression is the initial value for the parameter in case of an iterative calculation. It provides the possibility to assign a computed value as starting value, i.e. the result of an expression or the current value of another parameter.

HTML clipboardMember of functional group: [Modeling](#)

Member of knowledge base type: [Classic and general type](#), [Scenario type](#) and [Taxonomy type](#)

Example

@INIVAL:THRINI In the dataslot of a parameter assigns the current value of THRINI as starting value to the current parameter containing the expression.
