

# StrExp

Means string expression and is either:

- a string, for example:
  - "3"
  - "Test 3"
- an expression that will result into a string, for example:
  - "Test " + "3"
  - "Test " + [STR\\$\(3\)](#)
  - "Test " + b\$, with b\$ = "3" or b\$ = [STR\\$\(3\)](#)
- a parameter that has a string as value, for example:
  - b\$, with b\$ = "3" or b\$ = [STR\\$\(3\)](#)
