

URL\$

URL\$ creates an URL string.

Syntax

URL\$([PortNo](#), [HostName](#), Resource\$, Expr[:[ParLab](#)\$])

Arguments

- [PortNo](#) is the communication port number (0 is standard and 80 is for instance ordinary HTML browser communication)
- [HostName](#), the name of the host, can also be an IP number
- Resource\$ what you want to put in the URL
- Expr additional input

Remarks

1. This is a highly specialised function for interacting with web services. Please contact Qknowledge for more detail.
