Quaestor intrinsic functions overview

Quaestor has a large list of intrinsic functions that are dedicated to facilitate knowledge management as smooth as possible. Also look at the general [syntaxdescription](#).

The functionality can be divided into several groups of functions focusing on analysis, manipulation and document generation (either text, Word, Excel or any other format).

Groups: [System functions](#) | [Modeler functions](#) | [External process functions](#) | [Math functions](#) | [Data set manipulation functions](#) | [Text manipulation functions](#) | [Document generation functions](#)
