

DEBUG

DEBUG writes a defined result to a log file and gives the parameter this result.

Syntax

1. DEBUG(0, FileName, Write%)
2. DEBUG([ValExp](#), FileName, Write%)
3. DEBUG(Telitab\$, FileName, Write%)
4. DEBUG(Object, FileName, Write%)

Arguments

- [ValExp](#) is a value or expression result;
- FileName is a string value (either a string parameter or string);
- Telitab\$ is a [TeLiTab](#) result;
- Object is an object result;
- Write% can assume values of 0, 1:
 - Write% = 0: does not write to file;
 - Write% = 1: does write to specified file name;

Remarks

1. This function is created to debug complex knowledge bases
