User interface summary

First we will explain the user interface, when you as Knowledge Engineer start up Quaestor for the first time. If you are already familiar with the Quaestor user interface go to *Preparing a knowledge base for Taxonomy/Entity use*.

The Quaestor interface is of a multiple document interface [MDI] type. The standard layout of the child's in the interface is connected to a specific user type based on the user license. After activating the program Quaestor, with a Knowledge Engineer license, it will start in an MDI interface consisting of four windows.

Please read the following information in the wiki on the KE specific interface description for the Knowledge Engineer.

Go to the general interface description to read about the general interface aspects.
