

# Workbase buttons

Instead of the small buttons to control the calculation process, starting with version 2.46.2, large buttons are introduced that at the same time replace the old Dialog window with buttons that appeared always on top of all other windows.

As a result in the [Workbase](#) you can now switch between classic and new button view using the button on the right side of the colored information bar (with and **X** on 2.46.2 release, S and L on the 2.47.2 release and a picture on the future releases). By default the large buttons are used.

*The new buttons in the Workbase*

[blocked URL](#)

*The the old buttons in the Workbase*

As you might see, the new buttons communicate very well about the actions to be taken when you press the button. Very much like the buttons dit in the old Dialog window.
