MARIN Simple License Library

MARIN software is secured with MARIN's Simple License Library (SLL) licensing. There are two kinds of SLL licenses, node locked licenses and floating licenses.

A node locked license is a license that can be used on one PC. It is created for that PC and will not work on another PC. Floating licenses are licenses that are installed on a license server and that can be used by PCs that have network access to that license server. Floating licenses are used to share a limited amount of licenses among a larger group of users.

SLL can be used on both Scientific Linux and Windows systems.

Scientific Linux

- Using MARIN SLL node locked licenses on Scientific Linux 6 or 7
- Using MARIN SLL floating licenses on Scientific Linux 6 or 7

Windows

- Using MARIN SLL node locked licenses on Windows
- Using MARIN SLL floating licenses on Windows
