

@EXPLAINEU

The attribute @EXPLAINEU is used to indicate a file used in the explanation window for the End User.

Syntax

Place @EXPLAINEU:<filePath> in the data slot of the parameter or in the QEntityData parameter in an entity

The argument <filePath> can be either a web address or a local file. In case of a local file, the path will be added to the My_Knowledge\kb_<kbName>\Html\Documentation folder

When using a .html file/address, the anchors are recognized:

e.g. @EXPLAINEU:TRUSTdoc/General.html#General-thrusterAllocationType

Remarks

This attribute is used to indicate that all Excel sheets can be opened safely in the background, i.e. no password protection used. This is done by the EXCEL#() function with visibility mode=0.
