# Installing the License Server Manager

This section contains instructions for installing and using the License Server Manager. The License Server Manager is necessary if you want to use floating licenses. To install the License Server run the **Marin License Manager x86 32 bit setup.exe**.
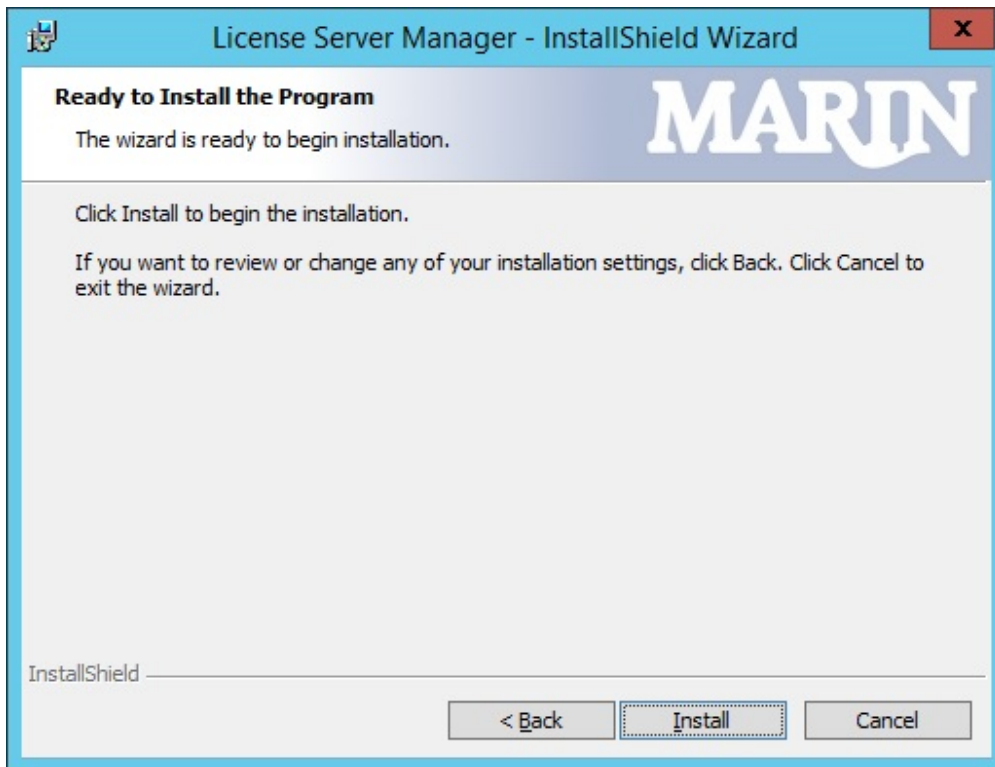

If Prerequisites are needed those are installed first.

The next step of the setup is to install the License Server Manager.
Click **Next** to continue.

Click **Install** to start the installation and configuration of the License Server Manager.

Wait until the installation completes. You will see two command prompts pop up. The first one installs the License Server Manager as a service. The second will start the service.

```
C:\Windows\system32\net.exe                                    _  □  x
The FlexNET License Manager service is starting.
```

Click **Finish** to complete the installation process.

License Server Manager - InstallShield Wizard

InstallShield Wizard Completed

The InstallShield Wizard has successfully installed License Server Manager. Click Finish to exit the wizard.
