

The Quaestor Help

To assist knowledge engineers, Quaestor provides information on a lot of topics such as the intrinsic functions, attributes, dimensions, etc. All this information can be found in the Quaestor node in the [Knowledge Browser](#).

The screenshot displays the QuaesTOR software interface. On the left, a text box explains the **@OPTIONLIST** parameter attribute, noting it was added by Hees, Maarten van on June 28, 2012. The central pane shows a hierarchical tree with 'Quaestor' as the root, containing 'Functions', 'Attributes' (highlighted), 'Dimensions', and 'Constants'. Below this is the 'Newqkb' folder, which includes 'Top Goals/Undefined' and 'Quaestor parameters'. On the right, a table lists various parameters and their attributes:

Frame	[dim]	Refere
OPTIONALGOTO	Modeling	The e
OPTIONLIST	Data selecti...	The p
OPTIONSSELECT	Data selecti...	The p
ORDER	Presentation	The v
OUTERLOOP	Modeling	The p
OUTPUTNONE	Binaries or ...	The n
OUTPUTTO	Presentation	The p
PAGE	Template	The s
PARAMETERLABEL	Presentation	The c
PARAMETEROPTIONS	Surtax	The p

Below this table, a summary row shows 'Frame' as '[dim]' and 'Refere'.

The information is based on HTML files which will be collected from the Wiki on the internet and presented in a browser. Note that, depending on your situation, an Internet connection is required to get the available data. The following information is available:

- Functions
- Attributes
- Dimensions
- Constants

Unknown macro: 'htmlcomment'
