

@NOMULTVAL

The **entity** attribute @NOMULTVAL is used to omit in an entity any [@MULTVAL](#) parameter, so only a list of singular values will be present.

Syntax

Place @NOMULTVAL in the data slot of the entity

Remarks

Is included in QEntityData to define the current entity to contain once case (so only a list) and as such, it overrules possible [@MULTVAL](#) attributes contained in any of the parameters in the entity.
