

@OBJECTTITLE

The **parameter** or **relation** attribute @OBJECTTITLE is used to define that the parameter or expression is evaluated and shown as object title in the [W orkbase](#) treeview.

Syntax

Place @OBJECTTITLE:Expression in the data slot of the parameter or relation

Arguments

- Expression can be a string, a single parameter or an expression

Remarks

This attribute is used in objects and makes it possible to show the object by means of a dynamic name. E.g., QEntity has @OBJECTTITLE: QEntityName + INCASE(QEntityIndex,GT,0,THEN," #" + STR\$(QEntityIndex),ELSE,"NullString") which shows the entity by its name and entity index, if any.
