

@RUNWORDMACRO

The **string relation** attribute @RUNWORDMACRO is used in the [WINWORD\\$\(\)](#) function to execute a macro in the Word template immediately upon opening the document.

Syntax

Place @RUNWORDMACRO:MacroParameter or MacroFile in the data slot of the relation

Arguments

- MacroParameter is the name of a parameter containing the name of a VBA (*.bas) file as value, MacroFile is the name of the VBA (*.bas) file itself

Remarks

This attribute is used in combination with the [WINWORD\\$\(\)](#) function. [Quaestor](#) does not have knowledge about the content of the VBA macro. This functionality inside the VBA macro remains the responsibility of the Knowledge Engineer.

Member of functional group: [Binaries or application](#)

Member of knowledge base type: [Classic and general type](#), [Scenario type](#) and [Taxonomy type](#)
