@DATABASE

The **object parameter** attribute @DATABASE is used to make a pseudo intrinsic function with @MULTICASE attribute containing a collection of cases behave like a selection Database.

Syntax

Place @DATABASE in the data slot of the parameter

Remarks

In combination with the @MULTICASE attribute, it makes sure that object that is used as pseudo-intrinsic function saves all its runs. Each time it is called upon during calculation, a case is added to its content, but only if its combination of argument values are not yet available in the current set of cases.

Member of functional group: Data management

Member of knowledge base type: Classic and general type, Scenario type and Taxonomy type
