Build up a ship configurator Taxonomy

The next step is to build a Taxonomy from scratch in order to create the example ship configurator. You can always verify your results by comparing them to `Ship_configurator.qkb3`, which is used in Using a Taxonomy type knowledge base, a Ship Configurator.

This tutorial consists of the following steps:

- Including entities in a taxonomy
- Developing a ship design process
- Adding parameters to entities
- Creating entity relations
- Some handy attributes
- Multiple entities
- Mass calculation
- Intact stability calculation
- Data to Word report
- Data to Excel
