

# Protect File

Depending on whether you are in a project or a knowledge base, this option enables you to define protections.

When you are in a knowledge base, the following window will open:

[blocked URL](#)

Because only a [knowledge engineer](#) can open en knowledge base, this option is only available to the [knowledge engineer](#). See [Knowledge base protection](#) for further details.

When you are in a project, the following window will open:

[blocked URL](#)

This functionality is only available for [domain experts](#). See [Knowledge base protection](#) for further details.

[Quaestor interface](#)
