ORCA

ORCA returns the number of cases in the current session or the current case number

Syntax

1. ORCA(0);
2. ORCA(1);
3. ORCA(@OBJECT);
4. ORCA(TeLiTab$);

Arguments

- 0, the function returns the total number of cases
- 1, the function returns the current case number which is now being executed
- For @Object, the function returns the number of cases in object @Object present in the current solution
- For TeLiTab$, the function returns the number of cases in the TeLiTab set

Remarks

1. This function is very useful to get information about multi-case problems during calculation

Examples

When you have a solution created by providing a range of 11(1)17

ORCA(0)

Returns
7

When you are in an object and you want to give a name to each case in this object by means of a parameter you could create a relation to be calculated in the object of:

Name$ = "Case_"+ORCA(1)

When you want to know how many cases are in an object or parameter containing a TeLiTab you can create a relation:

A = ORCA(Objectname) or A = ORCA(TeLiTabname)
