

Options Database tab

All options related to communication with the [Quaestor project file database](#) (QDB)

[blocked URL](#)

The following things can be defined:

- First of all, you can activate the database functionality by selecting "Save Project in Database". **This is only usefull when the [Quaestor project file database](#) is installed;**
- If you want to select to save project in the database, you have to give:
 - the server name or IP address on which the [Quaestor project file databse](#) is installed;
 - the port number (if different than default);
 - the Server time out in seconds. A tuning factor for networks with limited bandwidth or unstable connections;
 - the file size limit in KB to warn the user. Expecially useful in case of networks with limited bandwidth.
