Connect Constraint...

Connect constraint enables to connect existing contraints to a selected relation OR existing relations to a selected constraint

The option is only enabled when:

- You have selected a relation;
- Constraints are available;
- The relation is not already connected to all the available contraints...;

or

- You have selected a constraint;
- Relations are available;
- The constraint is not already connected to all the available relations...;

When selecting the menu option after selecting a **relation**, a dialog will open enabling you to select one or more not yet connected **constraints** to connect to the **relation**

blocked URL

When you select a contraint a description is provided on the right side.

When selecting the menu option after selecting a **constraint**, a dialog will open enabling you to select one or more not yet connected **relations** to connect to the **constraint**

blocked URL

When you select a relation a description is provided on the right side.

As mentioned before, always try to connect existing constraints before creating a new one...
